

One surface, and the physical branch is the upper sheet of a fold

- W_{-1} : $\mu \geq 0$, the vacuum
- W_0 : $\mu < 0$, a maximum
- the fold, $m_h = 0$

the star: $(A_4, 8D) = (212, 1)$, where the ceiling is attained
and d there is 10 times smaller than on their smallest row

the fold, $L = 0$:
 $W = -1$, $m_h = 0$
