

Once m_h is pinned the hierarchy is algebraic --- and the window ends it

Surface: $1/R_5 = 2\pi m_W \sqrt{(6\mu + A_4)/(12\zeta(3)D)}$, identity (II), at $m_h = 127$ GeV. Beyond the red edge no content satisfies identity (I).
 8D is odd on the seed [2] print; on the candidate seed of the open-questions section it is even, and the staircase starts one step higher.
